## A firewall is your first line of defense against unauthorized external threats.

### What is a firewall?

A firewall is a network security tool, which can be hardware or software, situated between a company's internal network and the public internet to protect the network from external intrusions.

## Misconfigured firewalls are a top reason for network security breaches.

A properly configured firewall can be complex and challenging to manage. Gain peace of mind by partnering with Blackfoot Communications. Our Managed Firewall services include advanced anti-malware and anti-virus protection, URL filtering, file filtering, advanced threat alerting and more. Plus, 24/7/365 network monitoring and access to our certified experts. Let us keep your network protected for one predictable monthly cost.
